

EcoFlow E-one - Alarm Panel

DO NOT TURN POWER OFF

Please call Rotorua Lakes Council as soon as possible if you notice any of the following issues with the treatment system:

- **Strong or unusual odors coming directly from the tanks**
- **Loud or unusual noises from the tank or control panel**
- **Alarm sounding or flashing red light**
- **Toilets and Sinks draining slowly**

Rotorua Lakes Council

IMPORTANT

The EcoFlow wastewater system must be maintained and repaired by an EcoFlow trained and Registered Technician. Untrained personnel must not attempt to undertake EcoFlow E-One servicing or repairs. It is important to contact Rotorua Lakes Council promptly if there is a problem or suspected problem. If a system requires repairs and is not attended to promptly, further damage is likely to occur.

EcoFlow E-one - Onsite System

DO NOT TURN POWER OFF

Going on Holiday: It is suggested that before you depart that you:

- Partially fill the bathtub and then release it into the drain or run your washing machine through a cycle. This will activate the pump in the tank and flush clean water through the system.
- Advise your neighbors of the procedure should the alarm be activated. They can contact us in the event of the alarm sounding.

The following substances are not to be discharged into this or any other household sewerage system under any circumstances:

Some things are not meant to go into the sewer and these can result in a blockage of the discharge pipeline, damage to the grinder pump unit, danger to the people that service the units and environmental pollution.

- Rocks, broken glass, sand, metal, seafood shells and kitty litter,
- Nappies, socks, rags, pantyhose, clothes, plastic objects, sanitary napkins, tampons, wet wipes or similar products,
- Paints (water soluble or oil based), explosives, flammable materials, lubricating oils, chemicals, grease, petrol and diesel,
- Milk, food scraps, eggshells and cooking oil.
