# CONTRACTOR'S APPROVED SERVICE LEVELS FOR CONNECTION TO ROTORUA LAKES COUNCIL WATER/WASTEWATER AND STORMWATER INFRASTRUCTURE

The logo for Rotorua Lakes Council, featuring the words "ROTORUA" and "LAKES COUNCIL" in white, bold, uppercase letters on a black rectangular background.

## WATER

Work carried out by Water Approved Contractors is split into two levels of connection as described below. Work carried out on mains 200mm diameter or larger will be done by the Council Maintenance Contractor – **InfraCore Limited**. Approved Contractors can be registered for one or more of these construction levels and must not under any circumstances carry out any works beyond the Level which they are approved for.

### **Level One (W1)**

#### *Installation of service connections under pressure*

Covers the installation of service connections where no shutdown is required. The connection is to be carried out by live tapping of the main with up to a 32mm diameter connection, and with special equipment up to a 60mm diameter connection.

### **Level Two (W2)**

#### *Installation of connections requiring a shutdown*

Provides for the connection of new mains to existing reticulation where a shutdown is required. Excludes mains sized 200mm diameter and over, critical mains or pumping mains.

## WASTEWATER (WW)

For all types of gravity connections

## STORMWATER (SW)

For all types of connections.

## LOW PRESSURE SEWER (LPGP)

For work on private property, including the installation of pressure sewer systems. Work on LPGP systems needs to be done to the relevant specifications and documentation (available from RLC).

(Note, connecting gravity sewer into an existing pump chamber comes under **(WW)**)
