Geyserview Natural Hazard Searches
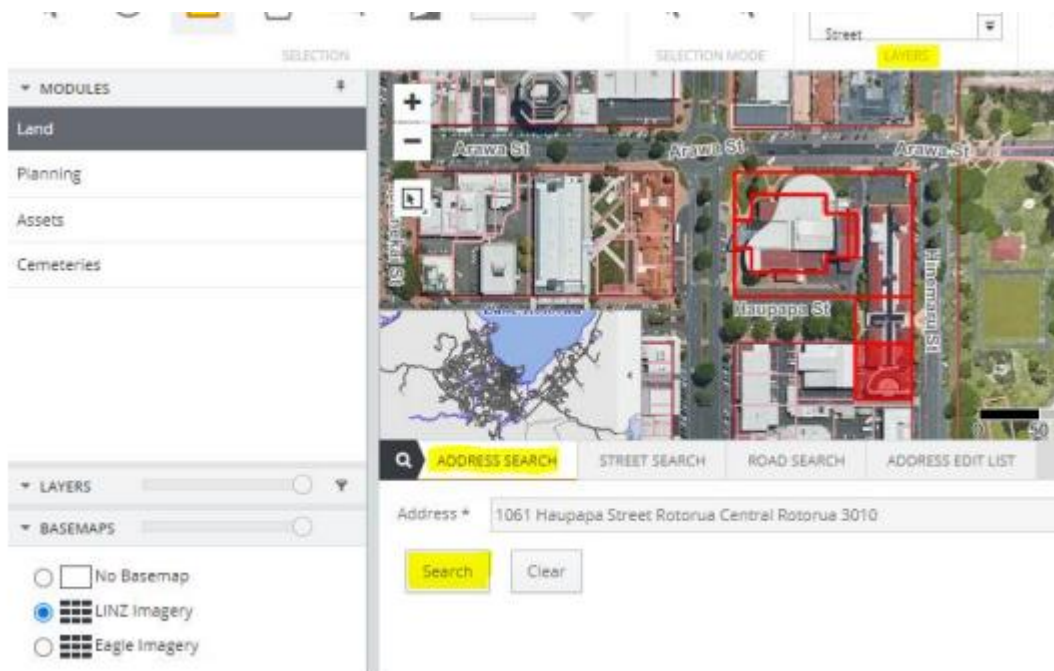

Quick reference guide

GeyserView 6 is Rotorua District Councils GIS spatial viewer and provides access to interactive map based information about the Rotorua District. With the viewer you can find various land information, including hazard information.

1. How to zoom to a property
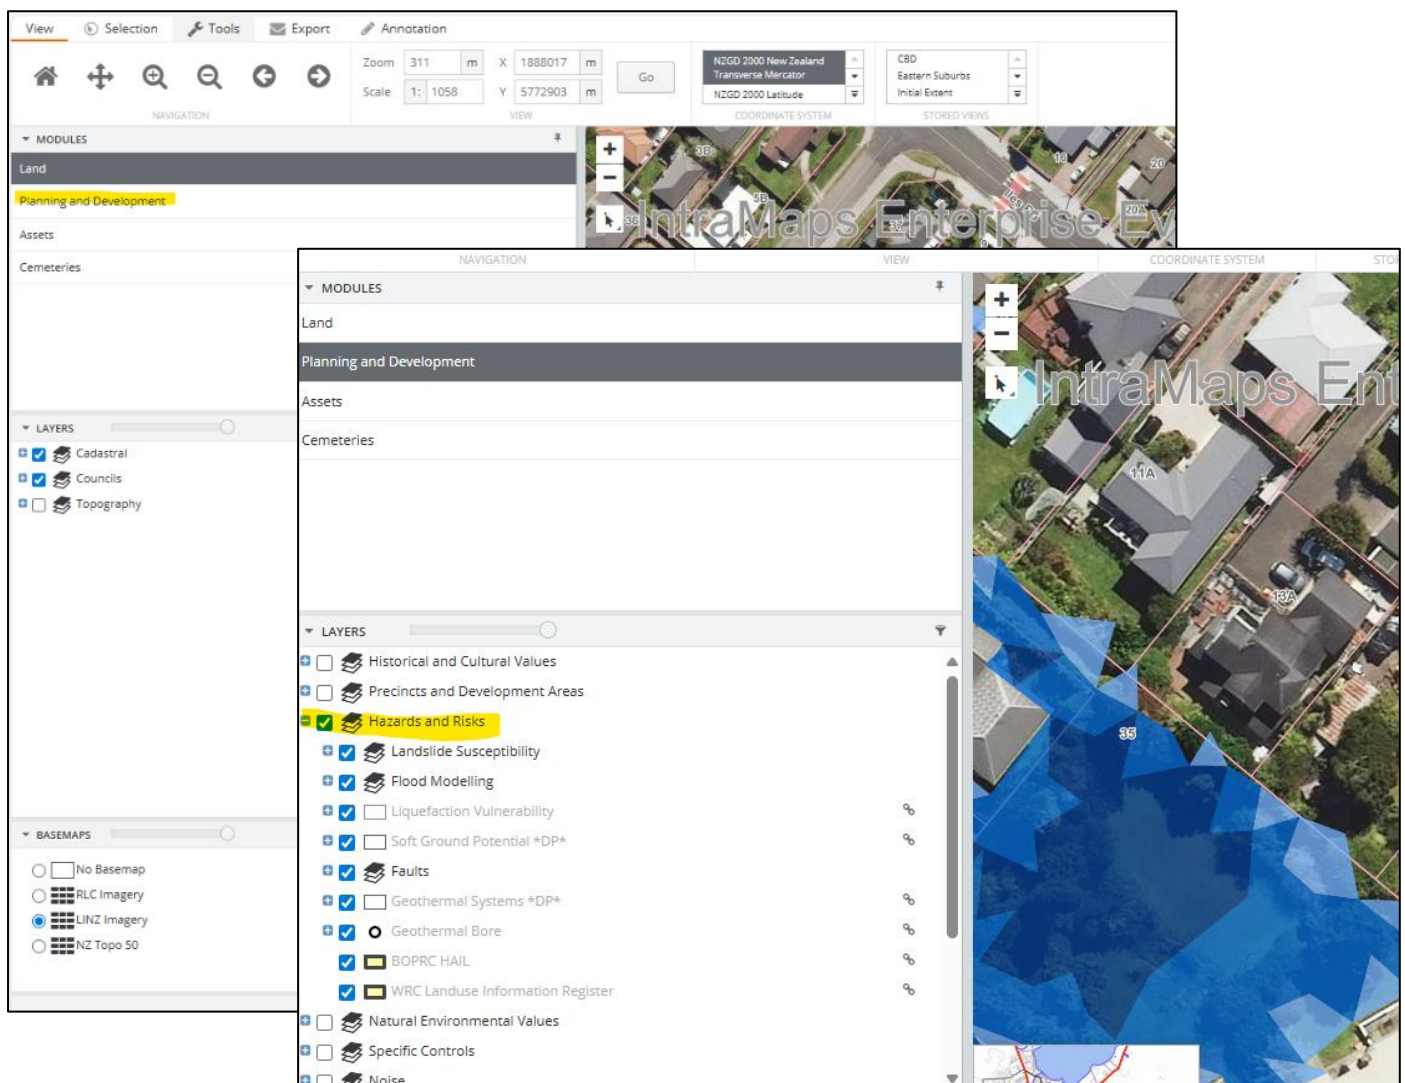

To find, zoom and select an address location:

- Click the **Address Search** in the search panel
- **Start the typing address** number and road you are after. Any matching addresses will appear in the dropdown
- **Click on the address** you are after
- Click **search.**

2. Hazard layers

To turn on the hazard layers:

- Click **Planning and Development** in the module menu in the upper left, as highlighted in the image below. A list of layers will appear.
- Click on **Hazards and Risks** to turn on all the layers. You can also choose to turn off and on individual layers
- NOTE: layers will not show if the viewer is zoomed in too close. Most layers can only be viewed at a scale of 1:5,000 and some only at 1:10,000

3 .Check the scale is sufficient

The scale must be no more 'zoomed in' than 1:10,000 to ensure you are seeing all hazard layers, but many will show at 1:5,000. You can check the scale in the scale box and use the '+' and '-' keys to zoom in and out.
