

Lichenstein Road

Site Number: SNA672
Ecological District: Otanewainuku
Source of Information: Shaw and Beadel (1998)
Digital Scale: 1:2,000
Data Source: RDAM 2006
Regional Council: Bay of Plenty
1998 Site Number: NHS No. 672
Current Tenure: Unprotected
Site Area: 10.7 ha
Altitude Range: 260-300 m
Bioclimatic Zone: Semi-coastal
Grid Reference: NZTM E1898846, N5791042

VEGETATION		LANDFORM	EXTENT
CODE	TYPE		
1	Rewarewa/tawa-mangeao-(pukatea) forest (with occasional kohekohe).	Rolling hillslopes	10.7 ha

Indigenous Flora: No threatened or at risk species, as listed in de Lange *et al.* (2009), have been recorded from this site.

Fauna: No threatened or at risk species, as listed in Hitchmough *et al.* (2007) or Miskelly *et al.* (2008), have been recorded from this site.

Notes on Overall Condition: Modified semi-coastal forest, previously logged, isolated by clearance of surrounding land and its conversion to pasture.

Change Relative to Shaw and Beadel (1998): Unknown - probably little change.

Threats/Modification/Vulnerability: This site is currently heavily grazed by cattle (Shaw and Beadel 1998).

Risk Assessment: Grazing (cattle): Risk to site - high; Timeframe - high.

Significance Level: Local (Appendix 4 - Table 1 - Criteria 1, 9; Table 2 - Factor L1).

Significance Justification: This site is of local significance as it is a good quality example of a semi-coastal forest which is under-represented in the existing reserve system in the Otanewainuku ED.

Fieldwork Required: No fieldwork required to assess significance, but fieldwork is required to update biodiversity and management information.

Notes: Small semi-coastal forest remnant. Semi-coastal vegetation is under-represented in the existing reserve system.
